

# Virtualization Improves Healthcare Delivery

Only 15% of companies felt their transformation was successful; 28% felt that transferring from legacy systems has caused confusion<sup>1</sup>

The global digital health market could experience 15.1% CAGR growth from 2021 to 2028<sup>2</sup>

## Telemedicine and AI/ML are building momentum

There is a renaissance in healthcare delivery options and methods to improve patient care, driven in part by the need to reduce physical contact during the COVID-19 pandemic. Telemedicine requires near real time access to patient data for routine activities such as reviewing care plans and medical histories, and AI/ML can be used to enhance customer experience and interpret data. Meanwhile, rising healthcare costs are causing consumers to demand innovative approaches to reduce cost and increase accessibility.

## Scaling to meet demand is not always easy

Cybercrime creates data privacy and safety concerns

Proliferation of point solutions makes it difficult to integrate and seamlessly share data

Provider workflows are not well integrated to support hybrid care models

## Overcome adversity and thrive with Taos

Digital transformation with Taos helps healthcare providers automate processes and grow their businesses by capitalizing on scalability, enhanced security and cloud economics. Taos offers Advisory Services, Professional Services, Managed IT and Security Services.

Design workflows to increase patient engagement, optimize operations and improve regulatory compliance

Automate repetitive, low-value processes with always-available cloud apps to boost employee productivity and patient communication

Use AI/ML analytics and blockchain to better understand opportunities to improve patient care

Lower IT overhead and reduce operating costs with SaaS consumption models

Explore Taos Managed IT and 24/7 Security Services for best outcomes

Taos works with you to develop a unique solution that best fits your needs and optimizes your ROI.
